Highlights

Wi-Fi 6 Upgrade Everything with Wi-Fi 6

The Archer AX23, based on the next generation 802.11ax Wi-Fi technology, takes your Wi-Fi to the next level while being backwards compatible with 802.11a/b/g/n/ac Wi-Fi standards.

Next-Gen Wi-Fi Speeds

Enjoy a faster and more stable network for streaming and gaming with lower latency and speeds up to 1.8 Gbps using newer mobile devices.†

Smooth Streaming

OFDMA allows clients to transmit both on uplink and downlink sharing one band at one time, which cuts the latency and jittering.‡

Refined Security

The latest Wi-Fi security protocol, WPA3, keeps you safe by enhancing protection against brute-force attacks and reinforcing Wi-Fi password safety.*

Backwards Compatible

Take your WiFi to the next level while being backwards compatible with existing 802.11a/b/g/n/ac Wi-Fi standards.

4× Larger Capacity for Non-Stop Entertainment§

OFDMA and 4-Stream technology greatly improve network efficiency and capacity to connect more devices simultaneously, satisfying your diverse networking needs ranging from extremely low traffic to highly bandwidth intensive.

Highlights

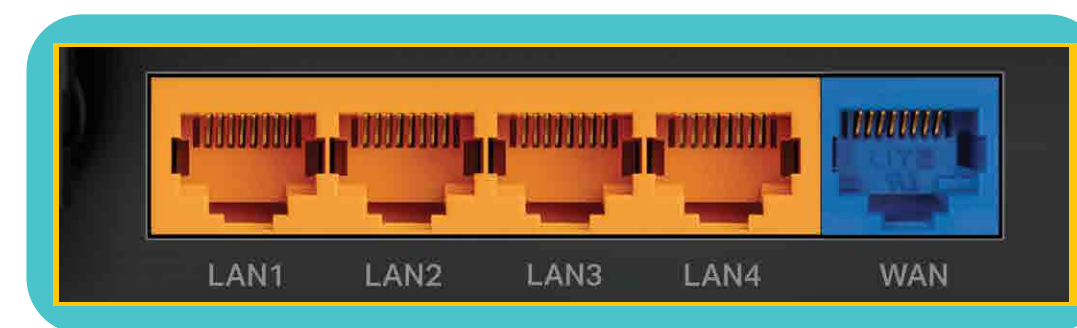

Flexible Whole-Home Wi-Fi

Four high-performance antennas and Beamforming deliver broad coverage. Furthermore, Archer AX23 supports OneMesh™ to form seamless whole-home coverage, preventing drops and lag when moving between signals.

Gigabit Internet Access

Take full advantage of your broadband with speed up to 1 Gbps with a Gigabit WAN port. Plug your PCs, smart TVs and game consoles into one of the four Gigabit LAN ports for fast and reliable wired connections.[^]

*Maximum wireless signal rates are the physical rates derived from IEEE Standard 802.11 specifications. Actual wireless data throughput, wireless coverage and number of connected devices are not guaranteed and will vary as a result of network conditions, client limitations, and environmental factors, including building materials, obstacles, volume and density of traffic, and client location.

†Use of 802.11ax (Wi-Fi 6), and features including OFDMA and 1024-QAM requires clients to also support corresponding features.

‡The 802.11ax white paper defines standardized modifications to both the IEEE 802.11 physical layers (PHY) and the IEEE 802.11 Medium Access Control (MAC) layer as enabling at least one mode of operation capable of supporting improvement of at least four times the average throughput per station (measured at the MAC data service access point) in a dense deployment scenario.

§1,000 Mbps internet speeds require compatible service plans and equipment.

¶Use of WPA3 requires clients to also support WPA3.

**This router may not support all the mandatory features as ratified in the IEEE 802.11AX specification.

***Further software upgrades for feature availability may be required.
